SQUAD SAVER BAR FEATURES

Formed from sturdy 10 gauge steel, the moveable arm pivots on a 1/4" thick steel reinforcement, and is welded to a 3/8" thick mounting plate. A gas spring, mounted inside the arm, assists in raising and lowering the arm and holds the arm in the full vertical or full horizontal position. The mounting plate is designed with four 5/16" holes for ease of mounting in the ambulance. This Squad Saver Bar comes complete as shown, ready for padding and upholstery and mounting in your ambulance.
